

Features

- High efficiency up to 95%
- THD <20%
- Output current adjusted via DIP switch and fine-tuned via potentiometer
- CCT adjustable via DIP switch (optional)
- 2 versions selectable: 3-in-1 dimming & 3-in-1 dimming + 12V AUX output
- Dim to off without afterglow (optional and for HBA version only)
- Surge protection: L-N: 6kV & L/N-GND: 6kV
- All-round protections: over voltage protection and short circuit protection
- Flicker free

Application

· Highbay light

Descriptions

LF-HBA/HBC120 is a constant current LED driver featuring high efficiency, high PF and low THD. It has 2 selectable versions: 3-in-1 dimming & 3-in-1 dimming + 12V AUX output. There is a potentiometer and 2 DIP switches on the side of LED driver used for adjusting the output current (power) of LED drivers and CCT of luminaires.

Product Model

LF - HBA /C120

- 120: output power: 120W
- C: 3-in-1 dimming
- A: 3-in-1 dimming + 12V
- H: high voltage; B: for highbay light

| Additional Remarks | <ol style="list-style-type: none"> 1. It is recommended that user install over voltage protection, under voltage protection and surge protection devices in the power supply circuits of light fixtures to ensure electricity safety. 2. The PC cover, casing and end cap for assembling the LED driver in the light fixture must meet the fire rating of UL94-V0 or above. 3. The LED driver used in combination with the end device is one of the accessories of the whole light fixture, and the EMC of the whole light fixture is not only susceptible to the driver itself, but to the LED light fixture and the whole light fixture's wiring. Thus, the manufacturer of LED light fixture should re-confirm the EMC of the whole light fixture before the whole light fixture is finished. 4. It is suggested that user use a slotted screwdriver or a Philips to adjust the output current of LED driver in case that the potentiometer is damaged (the screwdriver should have good insulation at the head, body and handle, and the screwdriver with a 2mm head is recommended as well; what's more, please pay attention that the intensity of torque not exceed 500g.cm). 5. When using the LED driver, please pay attention that the total output power not exceed the maximum rated output power, otherwise the warranty service of LED driver would be failed. 6. When conducting withstanding voltage test on LED driver, please short-circuit the input wire L and N; the positive electrode and negative electrode of the output wire; the positive electrode and negative electrode of the dimming wire and AUX power supply. 7. Please fully inspect the withstanding voltage ability of LEDs and aluminum substrates and the value shall >2.5kVac. |

■ **Dimming Operation Instructions**

0-10V Dimming Operations

- Connect 0-10V signal to DIM terminal.
- In 0-10V dimming mode, when the input voltage is $0.8V \pm 0.15$, the light turns off; when it's $1.0V \pm 0.15$, the light turns on.
- Dimming depth: 10% (typical value)
- DIM+/- (without signal connected): 100% rated current output

■ **Dimming Operation Instructions**

Dim-to-off “Without Afterglow” Operation

The dim-to-off without afterglow version of HBA series is optional. If the other with afterglow versions need to be dimmed to off without afterglow, please refer to the following operation: when the dimming signal is 0V, the LED driver has no output, but there exists junction capacitance between the aluminum substrate’s copper foil and the grounding wire, which will make the LED beads glow slightly. Thus, it is necessary to respectively attach a resistor to every node of LEDs in parallel, and the resistance should match for the parameters of aluminum substrate and LEDs. (reference resistance: 3-5KΩ/size: 1206)

■ **Transportation and Storage**

1. Transportation

- Suitable transportation means: vehicles, boats and aeroplanes.
- In transit, it is necessary to prepare awnings for rain or sun protection. Moreover, please keep civilized loading and unloading to prevent the vibration or impact of LED driver as much as possible.

2. Storage

- The storage of LED driver shall conform to the standard of Class I environment. When using LED drivers which have been stored for more than 6 months, please re-test them firstly. Do not use them unless they are tested to be qualified.

Cautions

- Please use Lifud LED driver according to its parameters in the specification, otherwise the LED driver may malfunction.
- Using any incompatible light fixtures or those that have not been certified may cause fire, explosion or other risks.
- Man-made damage is beyond the scope of Lifud warranty service.
